Professional Summary

Unity game developer with **2.5+ years of professional experience** delivering games for mobile, PC, and WebGL. Specializes in **C# gameplay systems, real-time multiplayer, performance optimization, and cross-platform releases**. Ported a live multiplayer game to Unity and improved a Steam game from approximately **25–27 FPS to 120 FPS**.

Technical Skills

Game Development	Unity, C#, C++, gameplay, quests, FTUE, UI, custom localization, mini-games
Multiplayer & Backend	WebSockets, Unity Netcode, PlayFab, AWS S3, JSON-based data systems
SDKs & Services	Firebase, Google AdMob, AppLovin MAX, Adjust, GameAnalytics
Tools & Platforms	Git, GitHub, GitLab, Jira, Asana, Android, iOS, Steam, WebGL, CrazyGames, Poki, GameDistribution, Playgama, Yandex Games

Professional Experience

09/2025 - Present
Lahore, Pakistan

Associate Software Engineer

TapFire

- Ported **Jackaroo from Cocos/TypeScript to Unity/C#**, preserving gameplay and networking feature parity.
- Built modular gameplay systems and a **custom WebSocket network manager** for real-time server communication.
- Delivered live-game features, events, and fixes; improved **PlayFab** catalog and inventory retrieval.
- Integrated **Firebase, Google AdMob, AppLovin MAX, Adjust, and GameAnalytics**; shipped releases for Android, iOS, CrazyGames, Poki, GameDistribution, Playgama, and Yandex Games.

02/2024 - 03/2025
Lahore, Pakistan

Unity Game Developer

Tensei Games x Devsinc

- Raised Steam game performance from **25–27 FPS to 120 FPS** through texture, mesh, rendering, and code optimization.
- Developed gameplay, mini-games, localization, and **Unity Netcode** multiplayer features across client projects.
- Integrated **PlayFab** game state and inventory systems and **AWS S3** runtime asset delivery.
- Built a **C# Telegram bot** and integrated **MetaMask and Tonkeeper** wallets.

10/2023 - 02/2024
Lahore, Pakistan

Trainee Game Developer

Game District

- Developed **three hyper-casual prototypes** and competitive racing AI using **Unity NavMesh**.
- Built a third-person controller with movement, combat, flight, animation blending, and human-to-robot transformation.

Projects

Jackaroo Master (Google Play)

Technologies: Unity, C#, WebSockets

- Recreated Cocos/TypeScript gameplay and server flows in Unity with multiplayer synchronization and modular systems for maintenance and expansion.

Alien Invasion (Google Play) | Poki Preview

Technologies: Unity, C#, Android, WebGL

- Built NPC-driven quests that gate progression until required objectives are completed, with dependencies, tracking, quest switching, and rewards.
- Implemented FTUE using the **state machine design pattern**, with directional guidance, combat and upgrade tutorials, and progression unlocks.
- Updated rocket quests, UI feedback, respawn, and ascension tasks; delivered the Poki WebGL build and **ported the game to Android**.

My Fun Park (Google Play)

Playgama | Yandex Games

Technologies: Unity, C#, WebGL, Google AdMob, Adjust

- Added two rides, progression/economy integration, and reusable skins; fixed gameplay and stability issues and delivered Android releases with ads and attribution.
- Ported to CrazyGames, GameDistribution, Playgama, and Yandex Games.
- Built custom localization from scratch, without Unity Localization, to meet project requirements.

Head Ball Goal (Google Play)

Technologies: Unity, Android, iOS

- Improved features and usability, updated SDKs, and fixed API, plugin, and build issues; tested and delivered Android and iOS production updates.

Shinsei Temple

Technologies: Unity, PlayFab, TonConnect, Telegram

- Built JSON-driven initialization, timed missions/training, and PlayFab inventory, upgrades, and cloud saves; integrated wallet authentication and Telegram auto-login.

FCTU Client

Technologies: Unity, C#, AWS S3, URP, Odin Inspector

- Built four-language localization, JSON-driven AWS S3 asset delivery, editor tools, and sliding, padlock, and radio-tuning mini-games; applied SOLID refactoring and URP migration.

Inferni (Steam)

Technologies: Unity, C#, Unity Netcode, URP, Steam

- Raised performance from 25–27 FPS to 120 FPS through rendering, texture, and code optimization; fixed multiplayer synchronization and architecture, and migrated to URP.

Ball2048 (Google Play)

Technologies: Unity, C#

- Built a 2048-style prototype with touch physics, ball merging, upgrades, obstacles, and finish-line progression.

Education

Bachelor of Software Engineering | PUCIT / FCIT

09/2019 - 07/2025 (Completed) | Lahore, Pakistan

Interests

Teaching • Table Tennis • Coding Challenges • Video Games • Cricket • Anime
